

SCAFFOLDING

ROHRER
GROUP

The Best in Scaffolding

Industrial scaffolding has been one of the supporting pillars of the success of our company for nearly 40 years. With its international position, it perfectly completes the business divisions of insulation, cleaning, catalyst and reactor service of the Rohrer

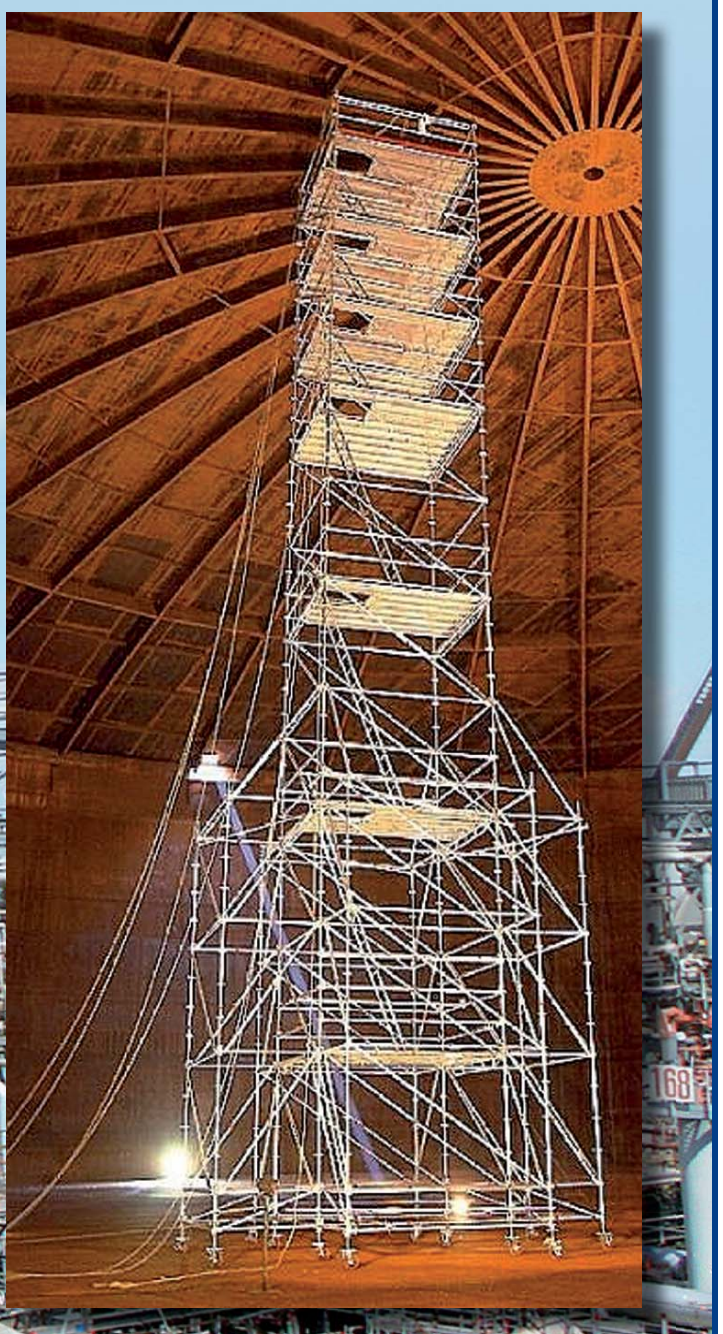

Group. We are your reliable partner for all types of scaffolding for industrial applications and we offer tailor-made solutions to suit your own personal requirements.

Qualified Personnel

Our ever-growing team of over 500 scaffolding experts – including everyone from the helpers to the actual scaffolders – is qualified by taking part in on-going internal and external training courses. The high quality of both personnel and scaffolding is guaranteed due to regular instruction of the safety regulations and legislations that are currently in practice.

Safety is our No. 1 Priority

High safety standards, adherence to safety regulations, top-quality scaffold materials and motivated employees are simply a matter of course at the Rohrer Group. Together with our customers we work on continually developing these high standards.

Top-quality Scaffold Materials

We only use the internationally proven Layher Allround Scaffolding System for our scaffolding applications. With approx. 20,000 tons or 1.2 million cubic metres of scaffold materials and about 100 scaffolding vehicles, we are more than well equipped to deal with the requirements of our industrial customers. The Layher Allround Scaffolding System complies with all international standards and is certified by the German Institution for Structural Engineering (Institut für Bautechnik) and the Technical Inspection Association (TÜV). A major advantage of this scaffold system is the time saved on assembly and disassembly compared to scaffolding with tubes and couplers.

All parts of the Layher Allround Scaffolding System are regularly assessed and tested for safe performance and adhere to the strictest international standards. They are marked by name and approval reference before leaving the factory. The scaffold materials provide excellent compressive and tensile strength while at the same time ensuring an accurate fit and relatively light-weight individual component parts.

Applications

INDUSTRIAL SCAFFOLDING

- Working, safety and facade scaffolds
- Suspension scaffolds
- Heavy-duty and support scaffolds
- Mobile scaffolds
- Freight and passenger elevators
- Weather and pollution resistant scaffolds
- Special scaffolds like stands, stair towers and access ladders

BASIC AGREEMENTS

We are available 24/7 for maintenance and service works to your system. Numerous basic agreements at home and throughout Europe are proof of our success as an efficient partner that is able to carry out daily maintenance services.

PLANT DOWNTIMES AND REVAMPS

Due to our international experience and our large number of highly knowledgeable and flexible employees, we are well equipped to deal with scaffolding work in the course of plant downtimes.

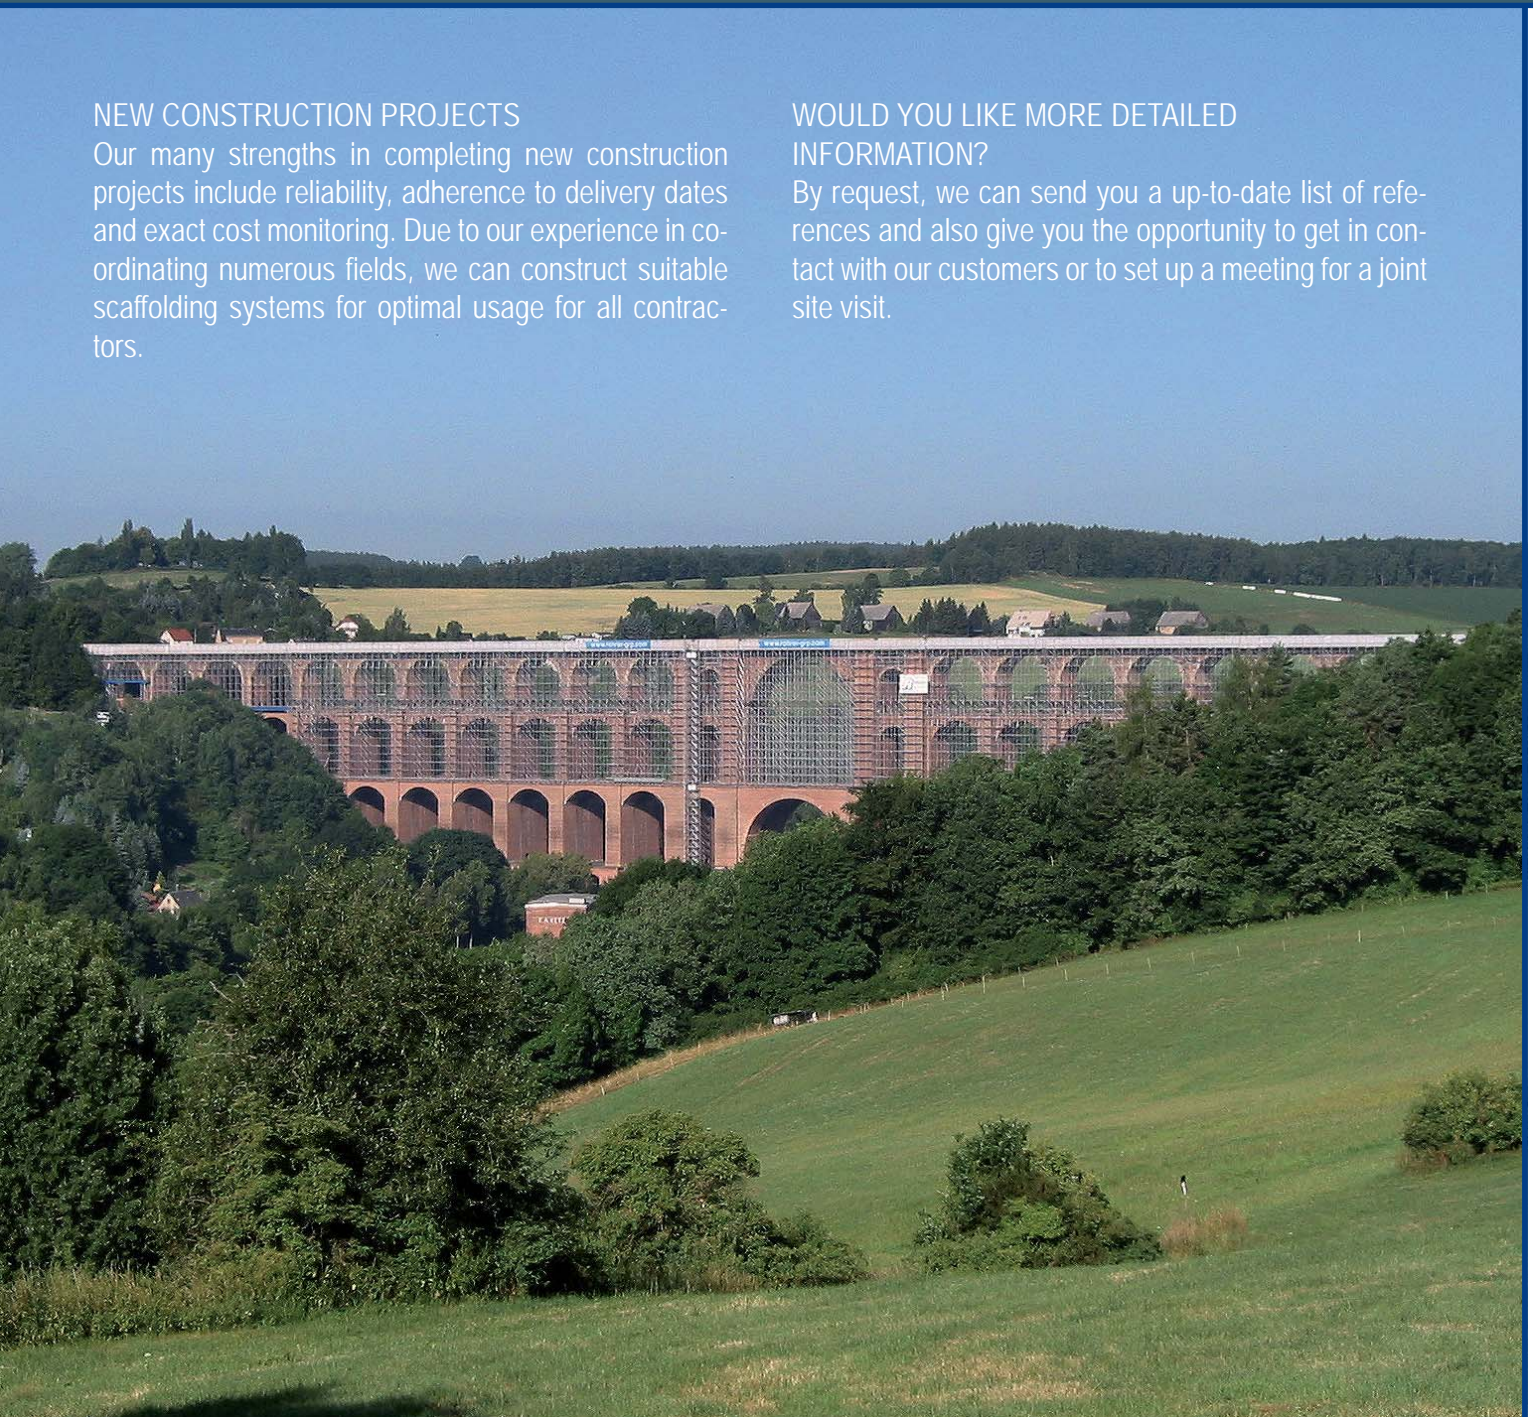

NEW CONSTRUCTION PROJECTS

Our many strengths in completing new construction projects include reliability, adherence to delivery dates and exact cost monitoring. Due to our experience in coordinating numerous fields, we can construct suitable scaffolding systems for optimal usage for all contractors.

WOULD YOU LIKE MORE DETAILED INFORMATION?

By request, we can send you a up-to-date list of references and also give you the opportunity to get in contact with our customers or to set up a meeting for a joint site visit.
